AWS BEGINNER GUIDE

How to Launch an EC2 Instance

A simple 13-step walkthrough using the Free Tier and Ubuntu

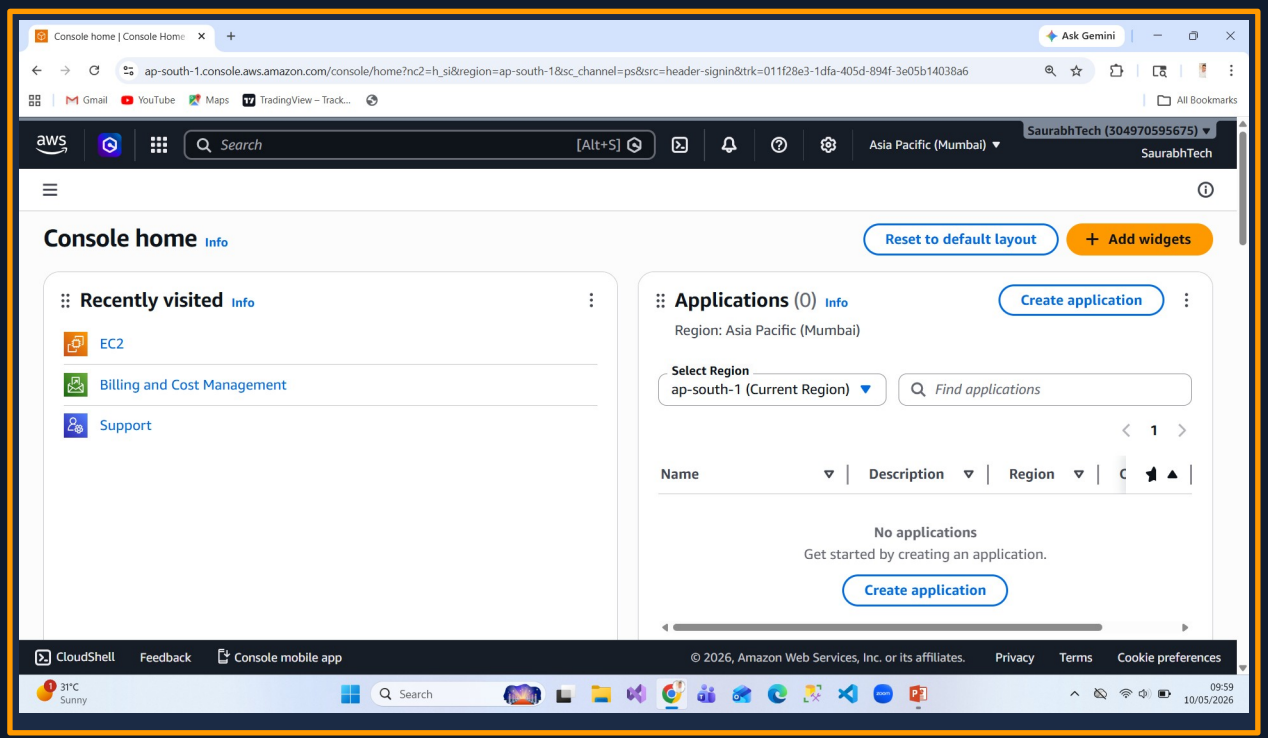

Saurabh Naikwadi | AWS • Cloud • DevOps

Swipe →

STEP 01 / 13

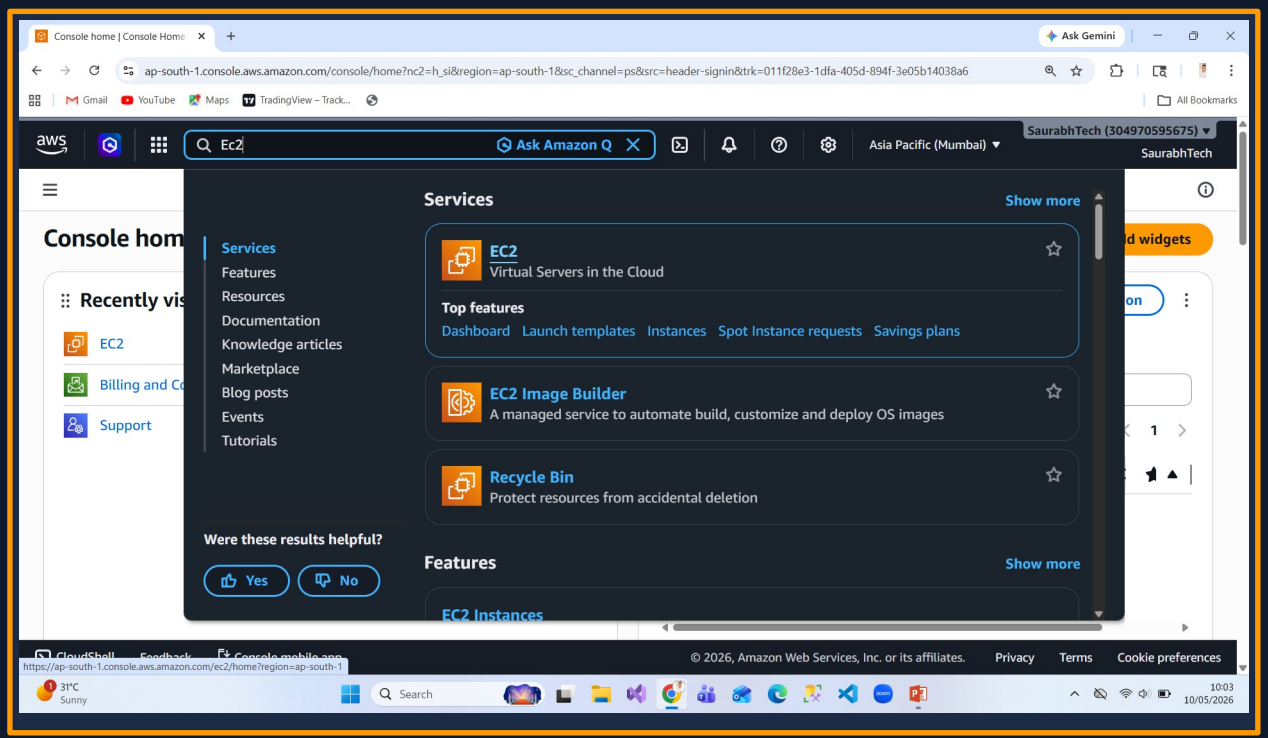

Search for EC2

Log in to the AWS Console and type EC2 in the search box at the top.

STEP 02 / 13

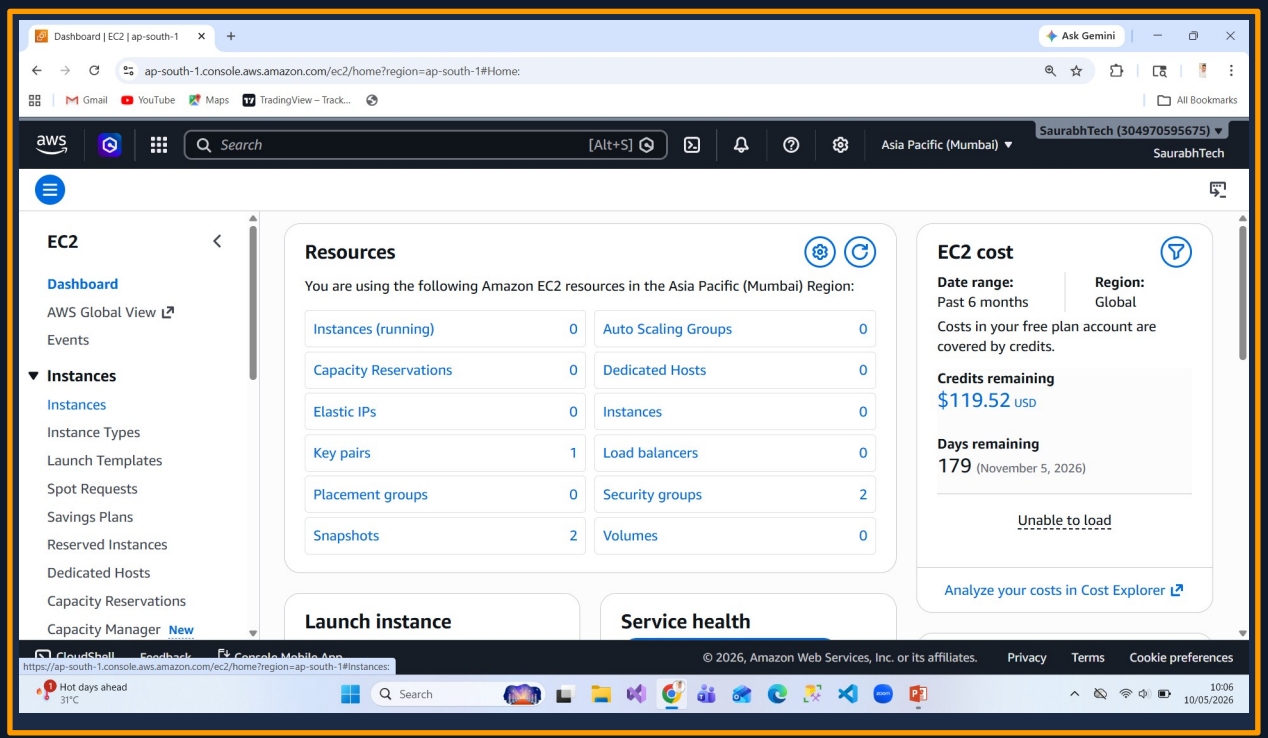

Open the EC2 service

Click EC2 in the search results to open the EC2 dashboard.

STEP 03 / 13

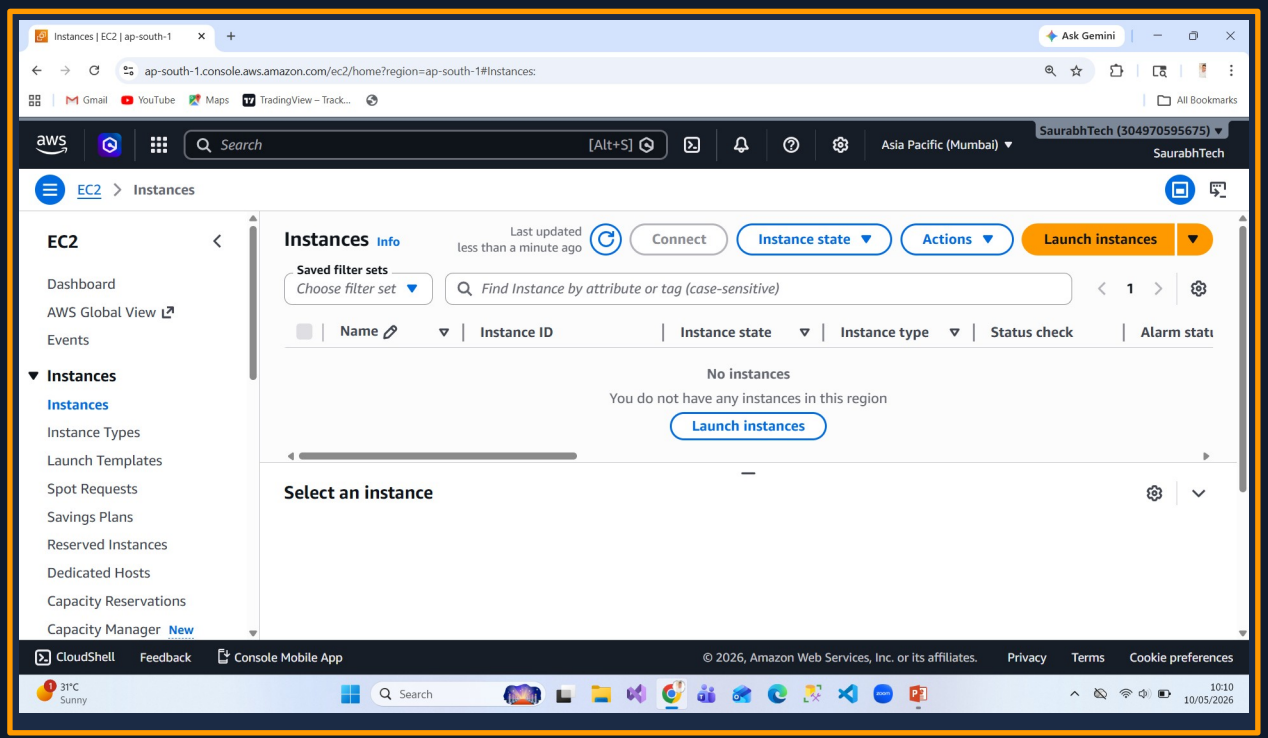

Go to Instances

In the left navigation bar, click Instances.

STEP 04 / 13

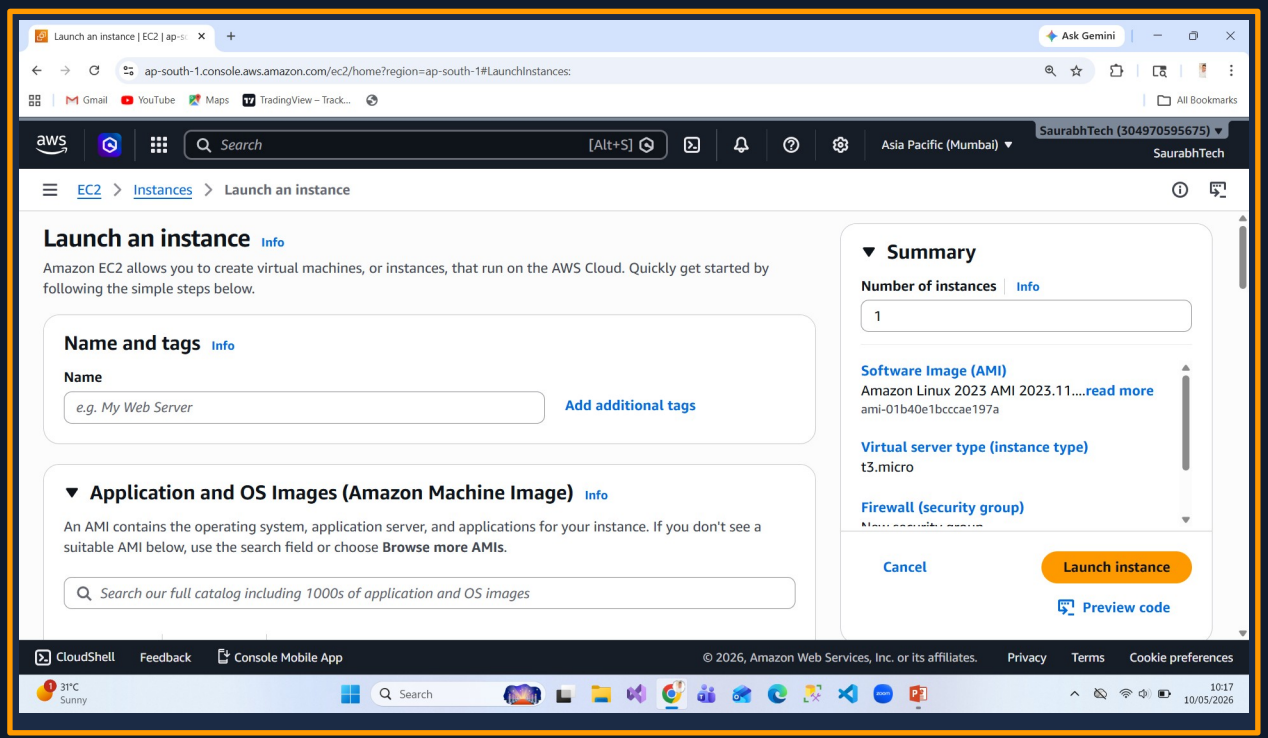

Click Launch instances

On the Instances page, click the orange Launch instances button at the top right.

STEP 05 / 13

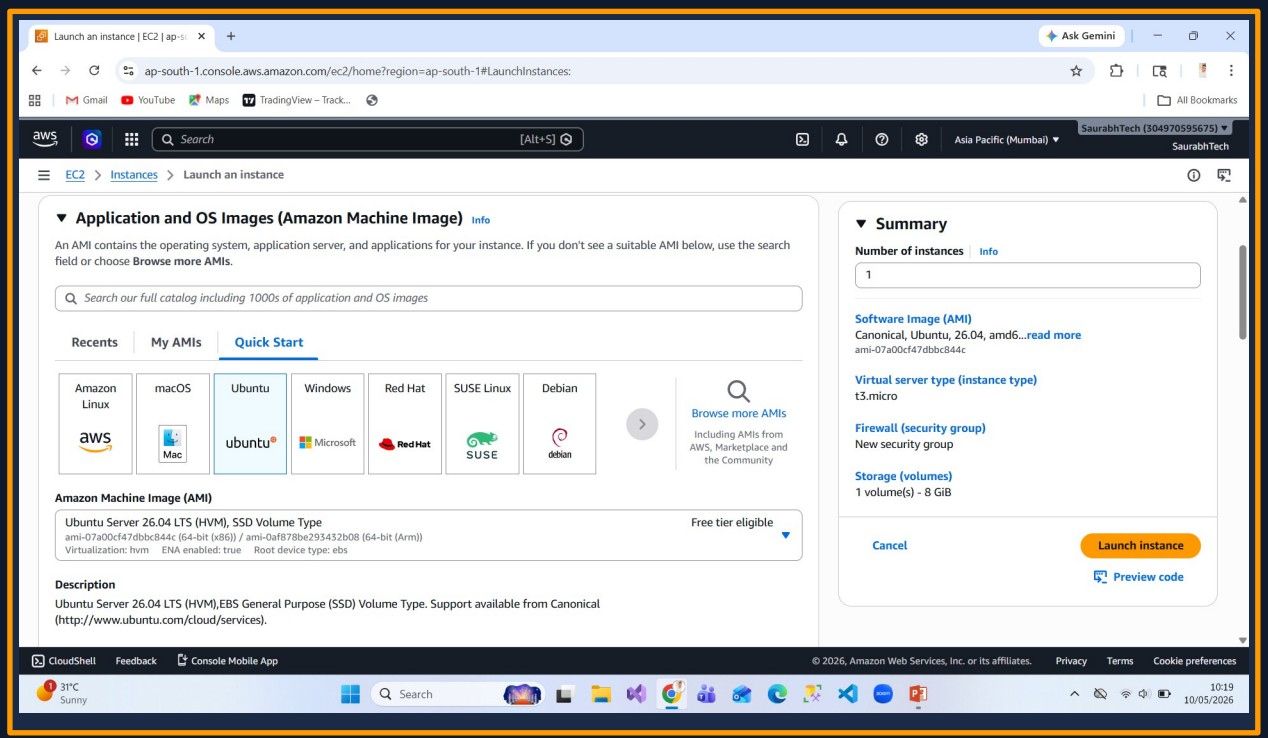

Name your instance

Type a name for your instance in the Name field.

STEP 06 / 13

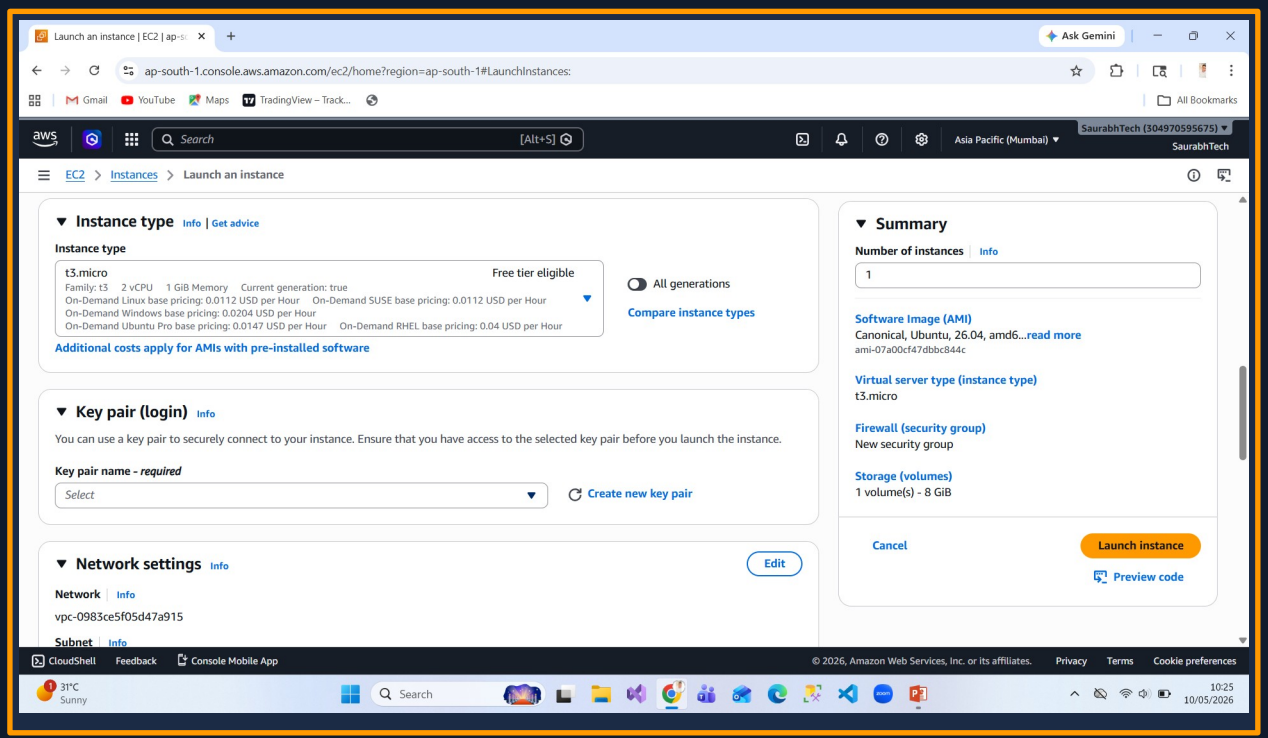

Choose an AMI

Select Ubuntu as the Amazon Machine Image and pick a Free tier eligible version.

STEP 07 / 13

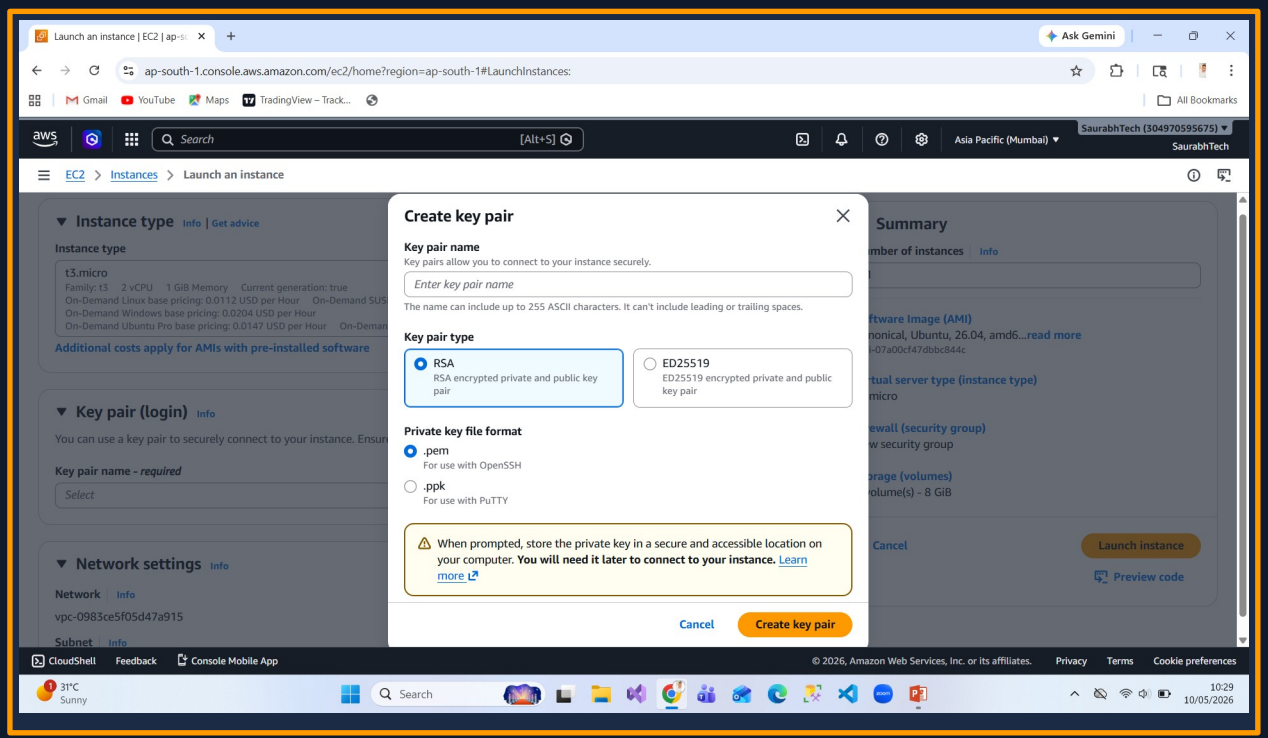

Pick type & key pair

Choose a Free tier eligible instance type, then click Create new key pair to generate your private key.

STEP 08 / 13

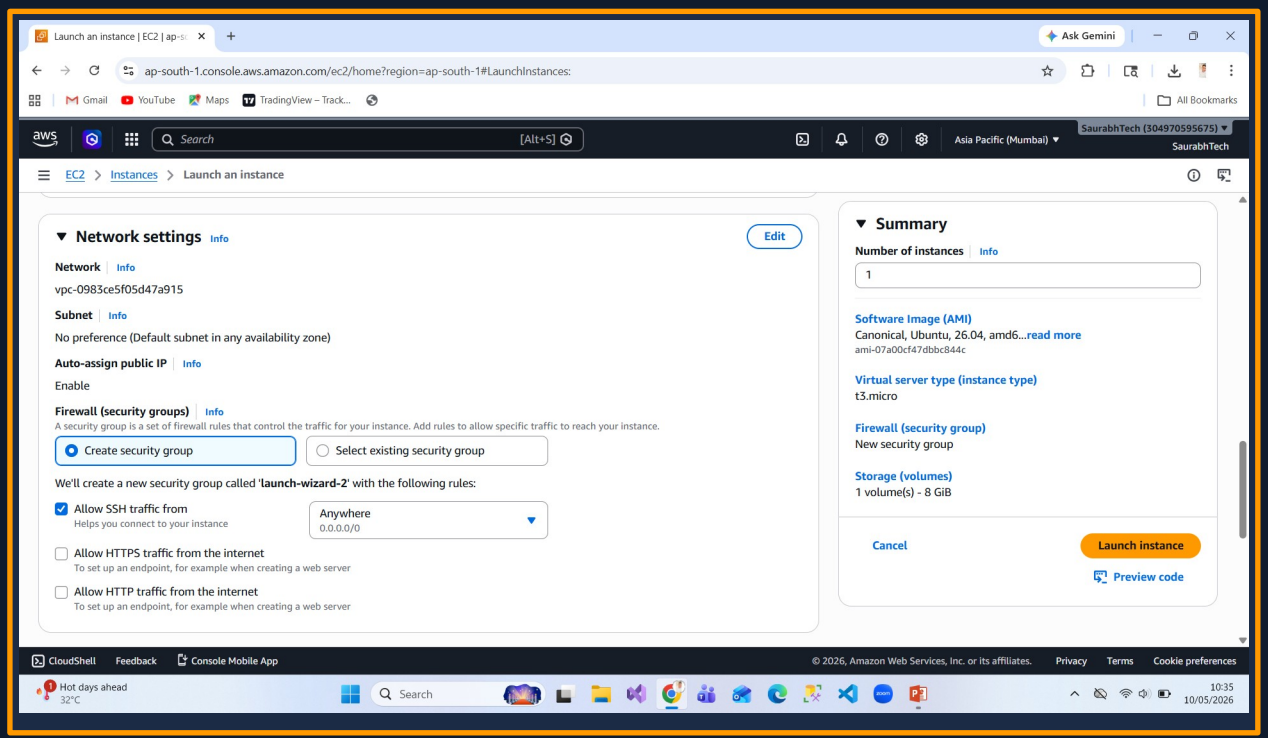

Create the key pair

Enter a name, choose RSA and .pem format, then click Create key pair. Your private key downloads automatically. Keep it safe!

STEP 09 / 13

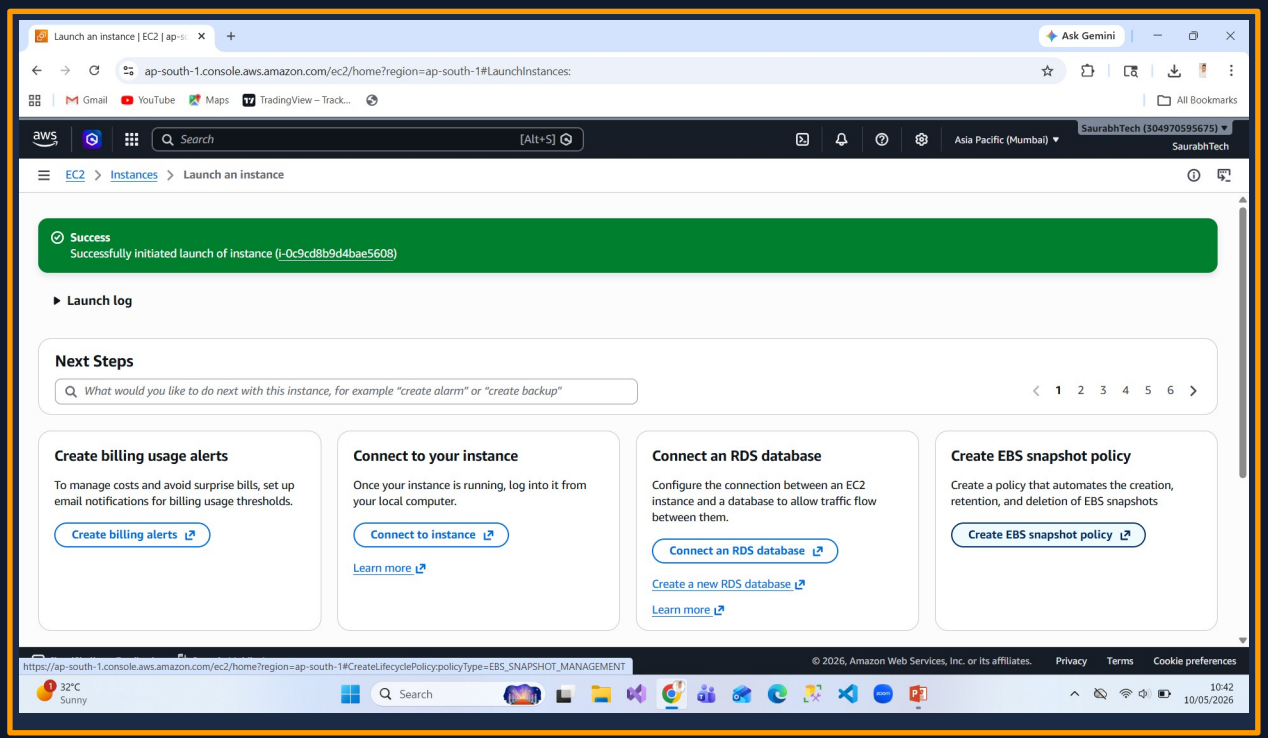

Set up the firewall

Create a new security group (or select an existing one) and set the rules you need. Then click Launch instance.

STEP 10 / 13

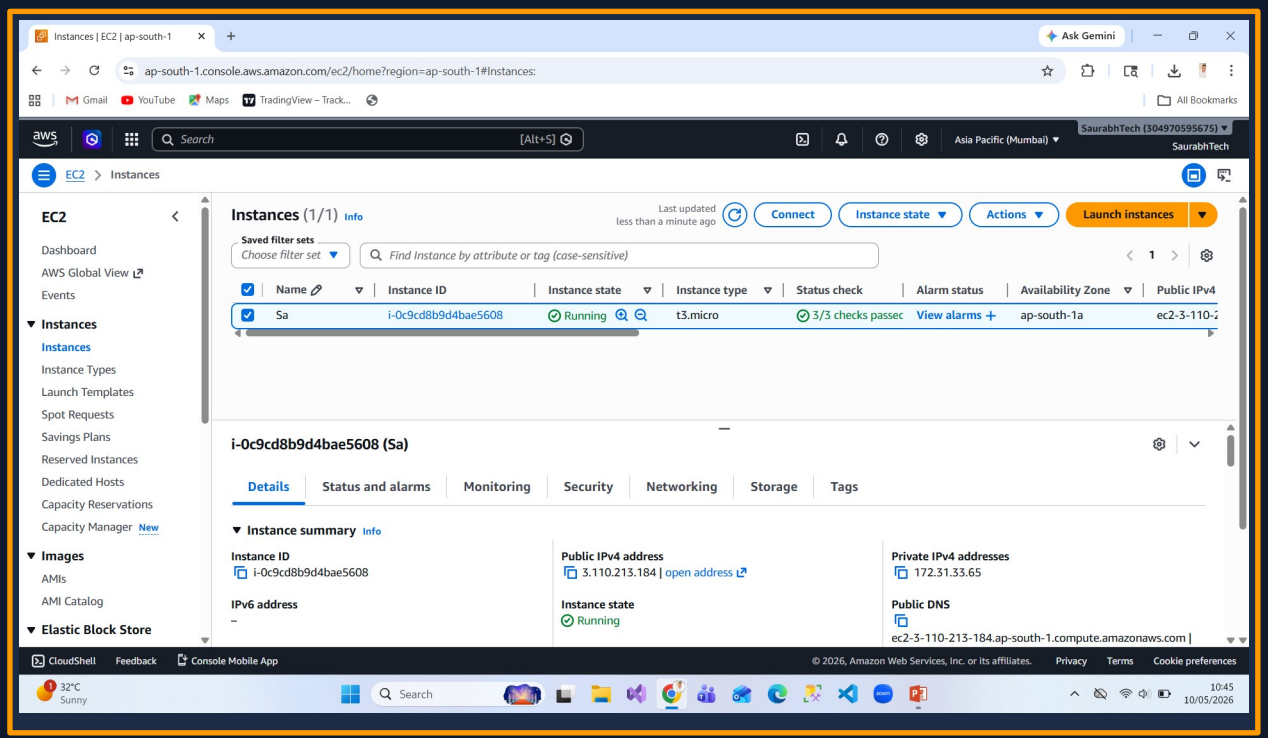

Instance launched!

Your instance is launching. Click Instances to go back to the instance list.

STEP 11 / 13

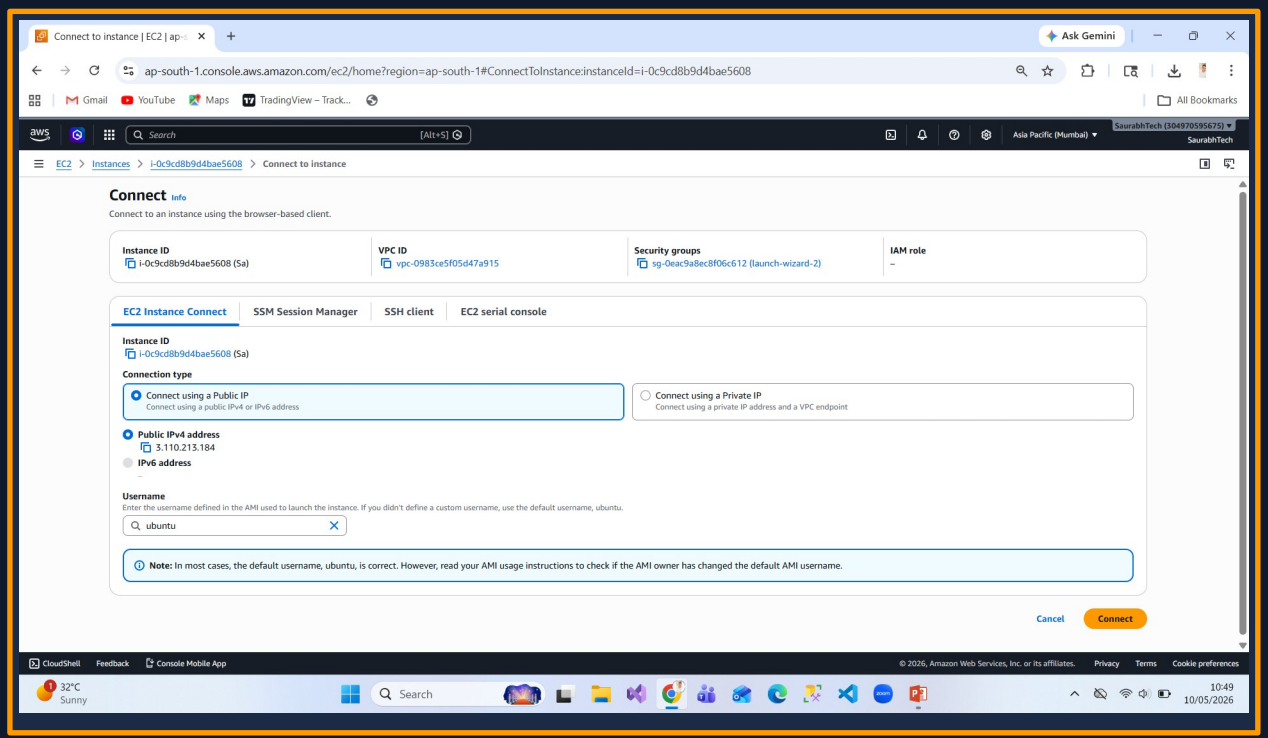

Select and Connect

Tick your instance and click the Connect button at the top right.

STEP 12 / 13

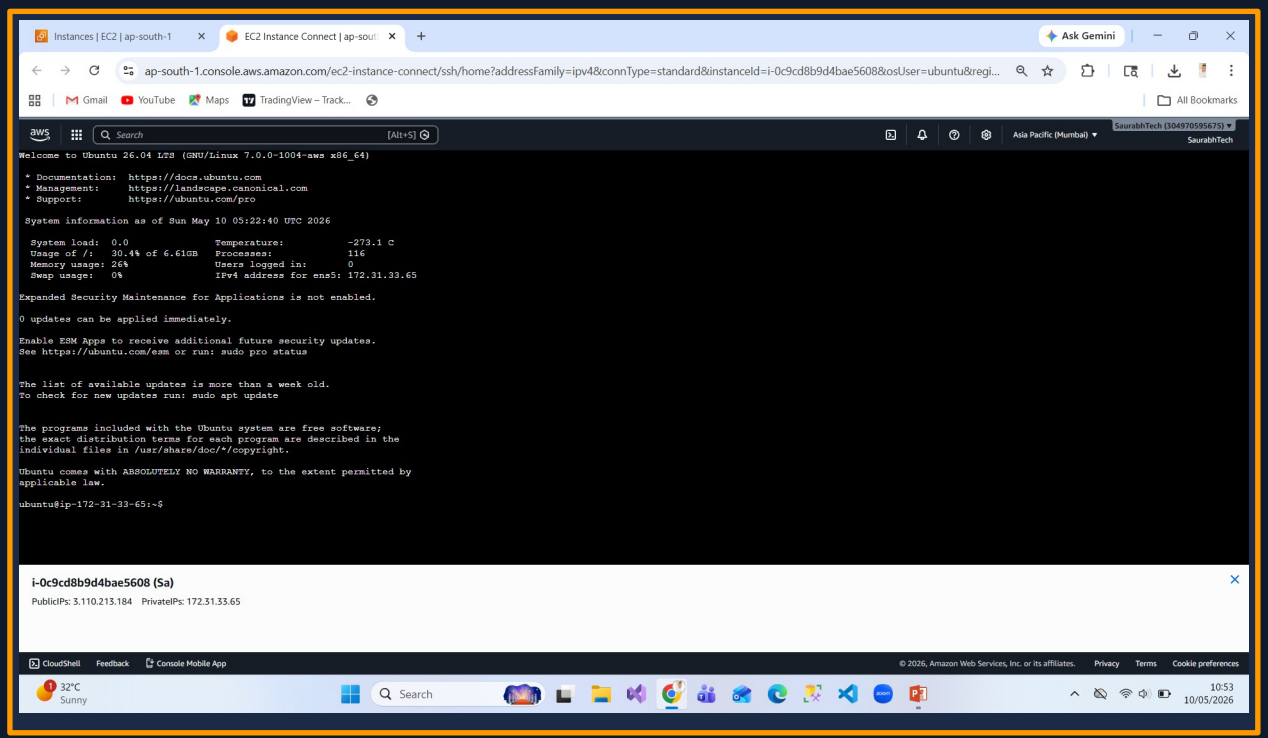

Connect to the instance

Keep the default settings and click Connect at the bottom right.

STEP 13 / 13

You're in!

Your instance is running and connected. Time to start working on it!

Your EC2 instance is live!
